

# MOST S LUKOVIMA

Zadatak je izraditi maketu mosta prema zadanoj tehničkoj dokumentaciji. Radne operacije podijeljene su u nekoliko etapa – priprema, ocrtavanje, izrezivanje i sastavljanje.

Osnovni građevni materijal je kapa ploča debljine 3 mm.

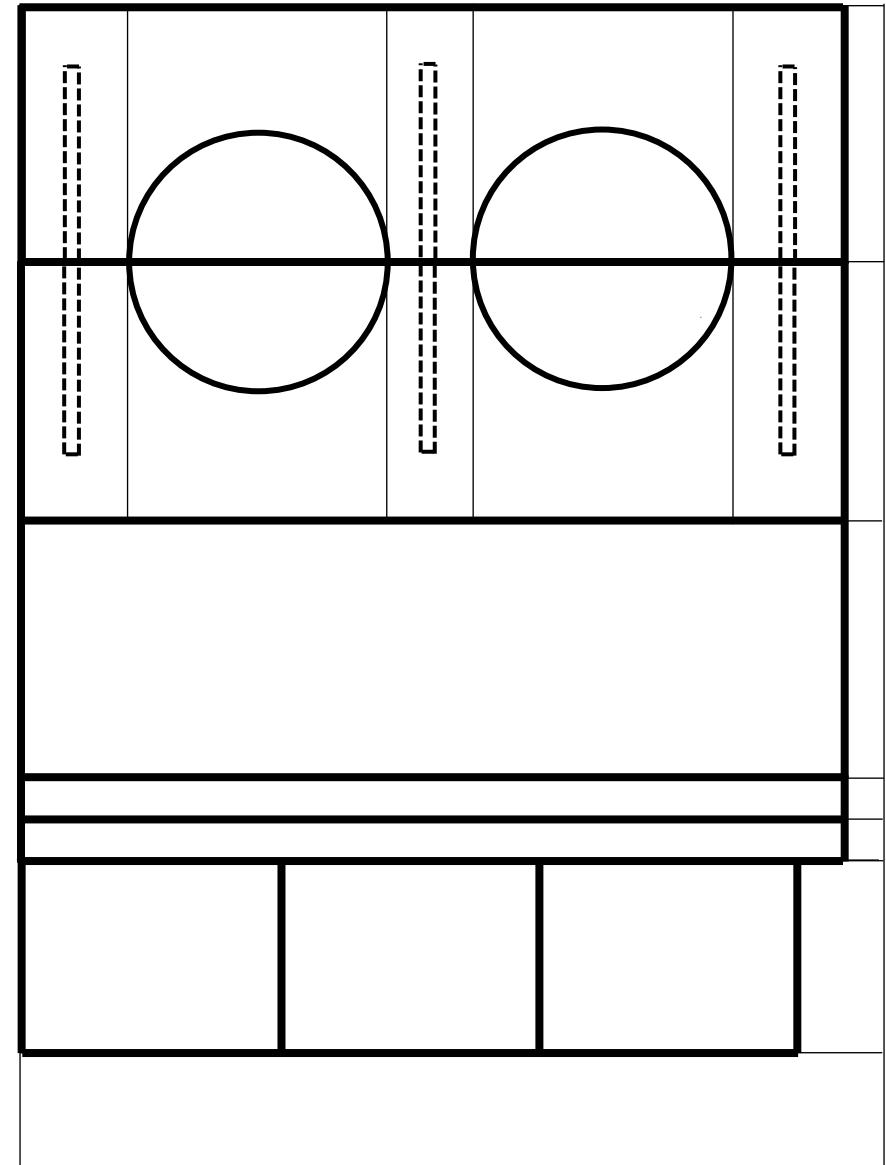

Pri ocrtavanju obrati pozornost na ekonomičnost u pripremi materijala.

Za ocrtavanje mjesta rezanja koristi se punim širokim crtama i ne pritišći olovku jako na materijal.

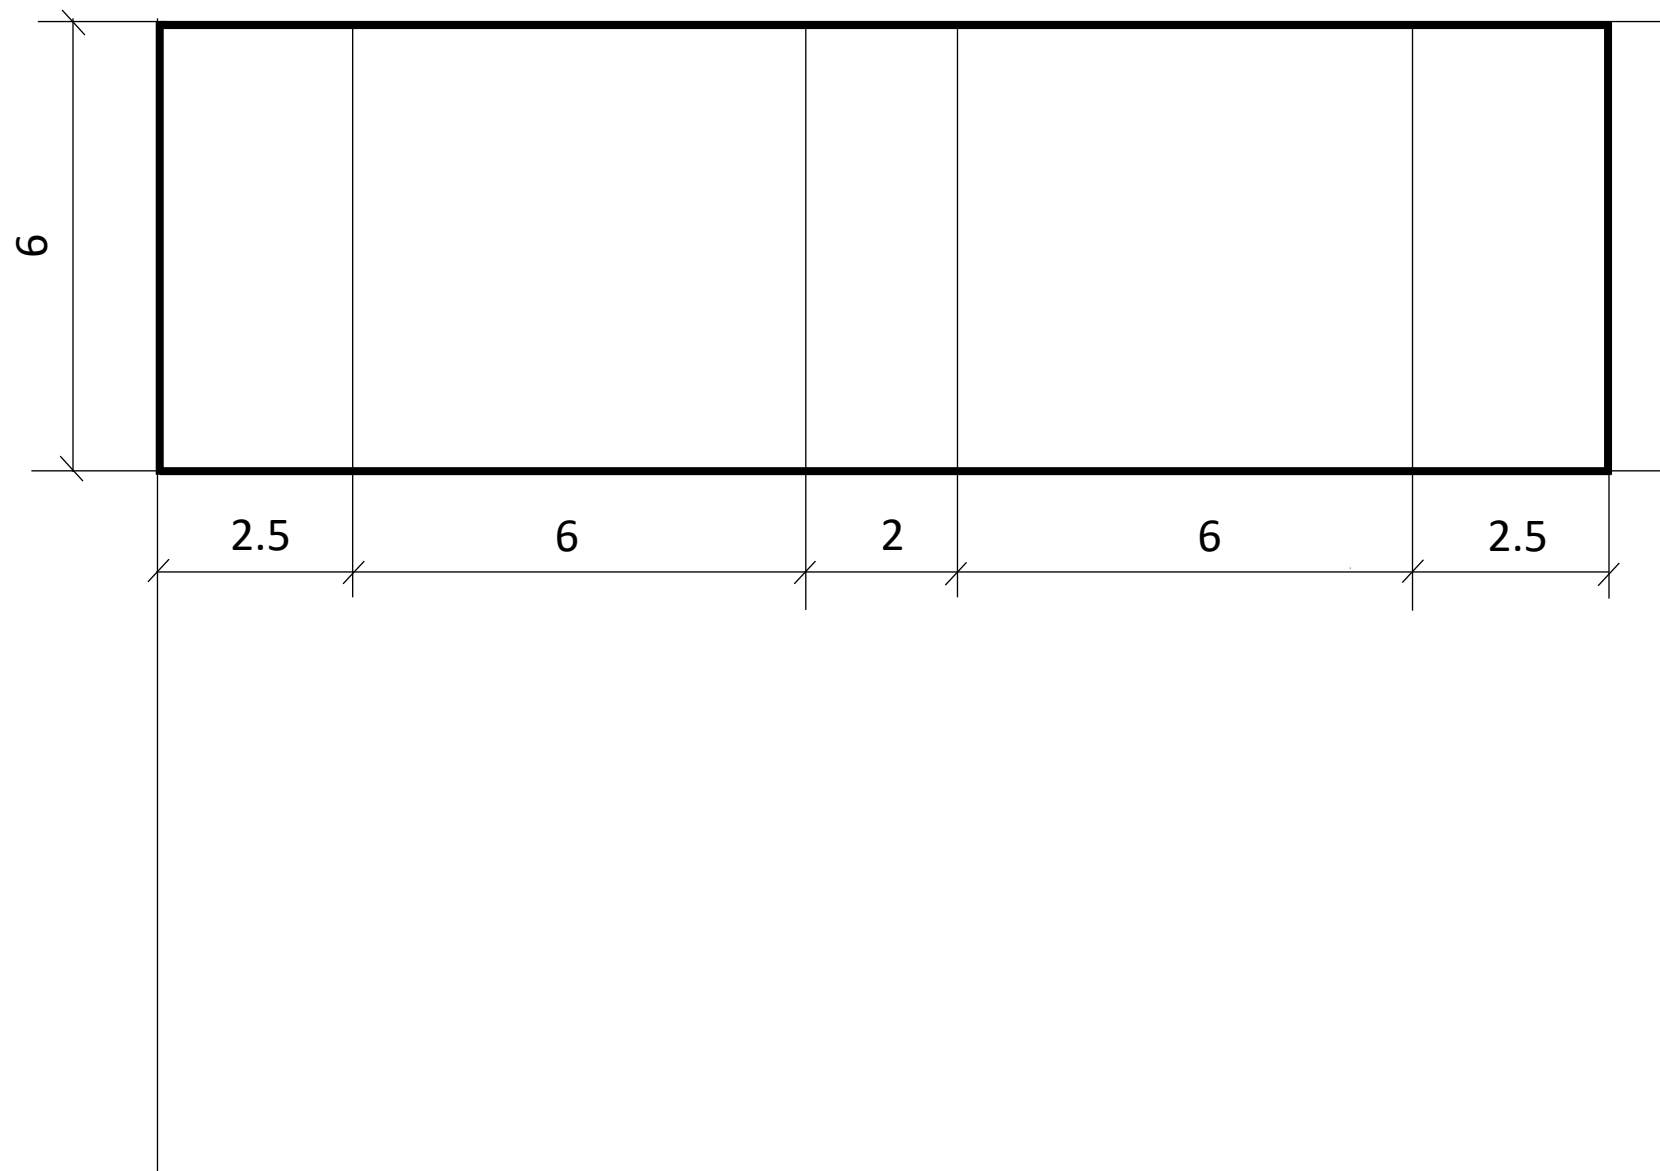

Isprekidane crte su mjesta lijepljenja ostalih pozicija za gotovu tehničku tvorevinu.

Primjer ekonomičnog ocrtavanja je prikazan na crtežu s desne strane.

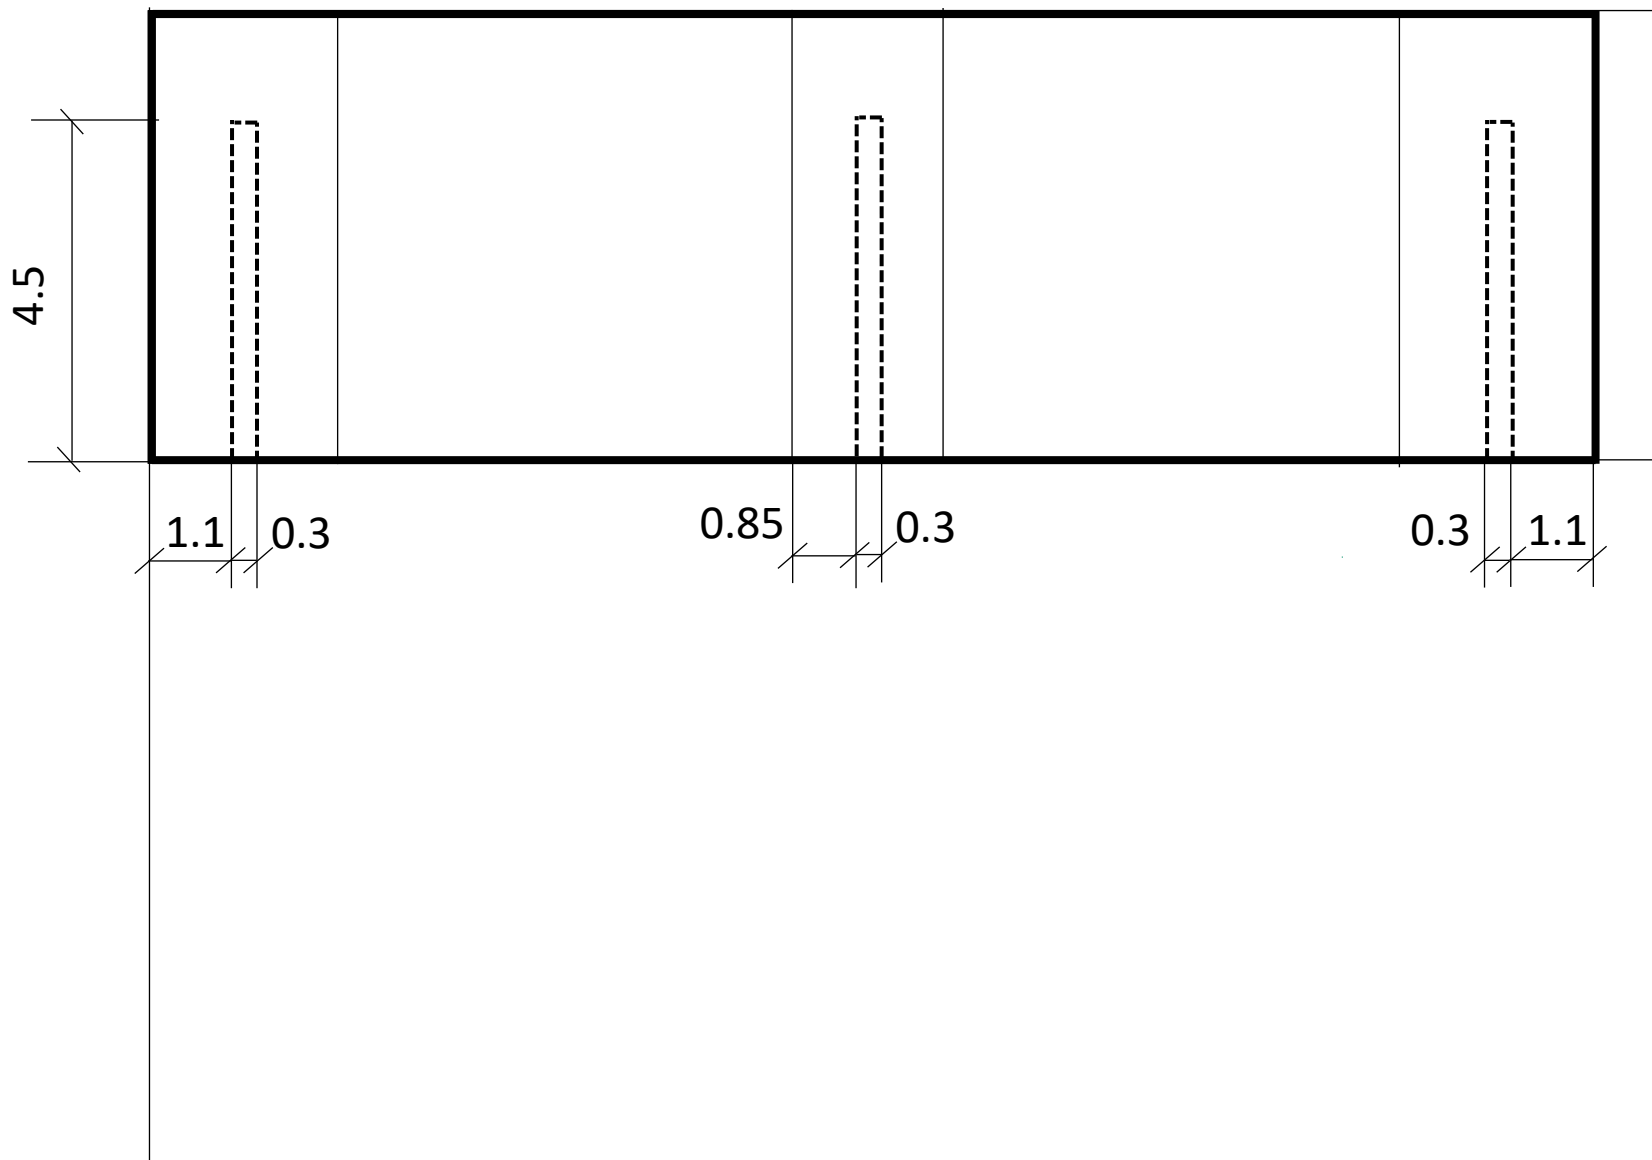

Krećemo s crtanjem iz gornjeg lijevog ugla.

- Ocrtane pozicije izreži modelarskim nožićem po punim širokim crtama.
- Za ravne rezove koristi se metalnim ravnalom ili kutnikom .
- Poštuj pravila zaštite na radu, radno mjesto drži organizirano i uredno.
- **Ostatak materijala nakon rezanja nemoj baciti nego spremi u kutiju.**

Pripremljene pozicije zalijepi  
na predviđena mjesta prema  
montažnom crtežu.
